INSTITUT PERTANIAN BOGOR
NOVEMBER 2014

HUBUNGAN HAM DENGAN FOOD SECURITY (KETAHANAN PANGAN)

1974

At the 1974 World Food Conference, governments examined the global problem of food production and consumption, and solemnly proclaimed that "every man, woman and child has the inalienable right to be free from hunger and malnutrition in order to develop their physical and mental faculties"

1974, 1986

- ❑ World Bank (1986) defined food security as "access by all people at all times to enough food for an active and healthy life"

Action:

- ❑ Food production and availability
- ❑ Food distribution and accessibility by all
- ❑ Individual consumption and meeting nutritional needs
- ❑ Food insecurity monitor

Food insecurity: unsafe food?

In the United States, each year one in four citizens suffers from a **food borne illness**. This translates to 76 million people.

In 1993, **food poisoning** outbreak in Denmark affected 700 people who had eaten pork contaminated with *Salmonella*

Present findings that **cancer causing agents** may be found in our everyday food. So what is safe?

Rome Declaration at World Food Summit

Nov 13, 1996

The Declaration enunciates both the ultimate goal and the immediate target: *"We pledge our political will and our common and national commitment to achieving food security for all and to an ongoing effort to eradicate hunger in all countries, with an immediate view to reducing the number of undernourished people to half their present level by 2015."*

1974, 1986, 1996

Rome Declaration at World Food Summit on 13 November 1996

"... the right of everyone to have access to safe and nutritious food, consistent with the right to adequate food and the fundamental right of everyone to be free from hunger."

Declaration touches on two issues

food security BEIJING: DEGENERATIE/KRONIS

food safety → DESENTRALISASI/KRONIS
RESMI 2013: GULA,/KARBOHIDRAT
MURNI

<http://www.fao.org/wfs/final/rd-e.htm>

- World Bank (1986) defined food security as "access by all people at all times to enough food for an active and healthy life"

Action:

- Food production and availability
- Food distribution and accessibility by all
- Individual consumption and meeting nutritional needs
- Food insecurity monitor

FOOD PRODUCTION AND AVAILABILITY : lokal atau impor?

**FOOD DISTRIBUTION AND ACCESSIBILITY BY ALL
INDIVIDUAL CONSUMPTION AND MEETING NUTRITIONAL/
FUNCTIONAL NEEDS**

**KEBIJAKAN PANGAN DI INDONESIA=
KETAHANAN PANGAN?**

FOOD PRODUCTION AND AVAILABILITY Produksi lokal atau impor?

	IMPOR	LOKAL
WAKTU	SINGKAT	LAMA
KEMUDAHAN	MUDAH	- LEBIH SULIT
KEMANDIRIAN /SECURITY/KEAMANAN	TIDAK ADA	PASTI MANDIRI: POTENSI BESAR
MODAL	BANYAK	LEBIH BANYAK
DISTRIBUSI	LUAS	TERBATAS
KEMAPANAN (SUSTAINABILITY)	TIDAK	PASTI: POTENSI HRS DIREALISASIKAN

FOOD DISTRIBUTION AND ACCESSIBILITY BY ALL: PRODUKSI LOKAL
IMPOR UNTUK SATU MUSIM SAJA,
PERLU SIAPKAN MODAL UNTUK BIAYA IMPOR DAN BIAYA AGRIKULTUR
(AMAT LAYAK)
SETELAH SATU MUSIM SUDAH BISA PANEN, TIDAK PERLU IMPOR LAGI

INDIVIDUAL CONSUMPTION AND MEETING NUTRITIONAL/ FUNCTIONAL NEEDS: 250.000.000 ORANG TERSEBAR DI SELURUH ARCHIPELAGO

PRODUKSI LOKAL MENCIPTAKAN PASAR RAKYAT EKONOMI RAKYAT KECIL

PANGAN FUNGSIONAL: BAHAN PANGAN UNTUK POLA MAKAN SEHAT YG DAPAT MENCEGAH PENYAKIT DEGENERATIF DAN GIZI KURANG

**BAHAN POLA MAKAN SEHAT
WHO 2012:
SUMBER YANG PALING KREDIBEL**

-Jika dapat mencegah kanker, mencegah penyakit kronis lainnya

Food, Nutrition and the Prevention of Cancer

a global perspective

SUMMARY

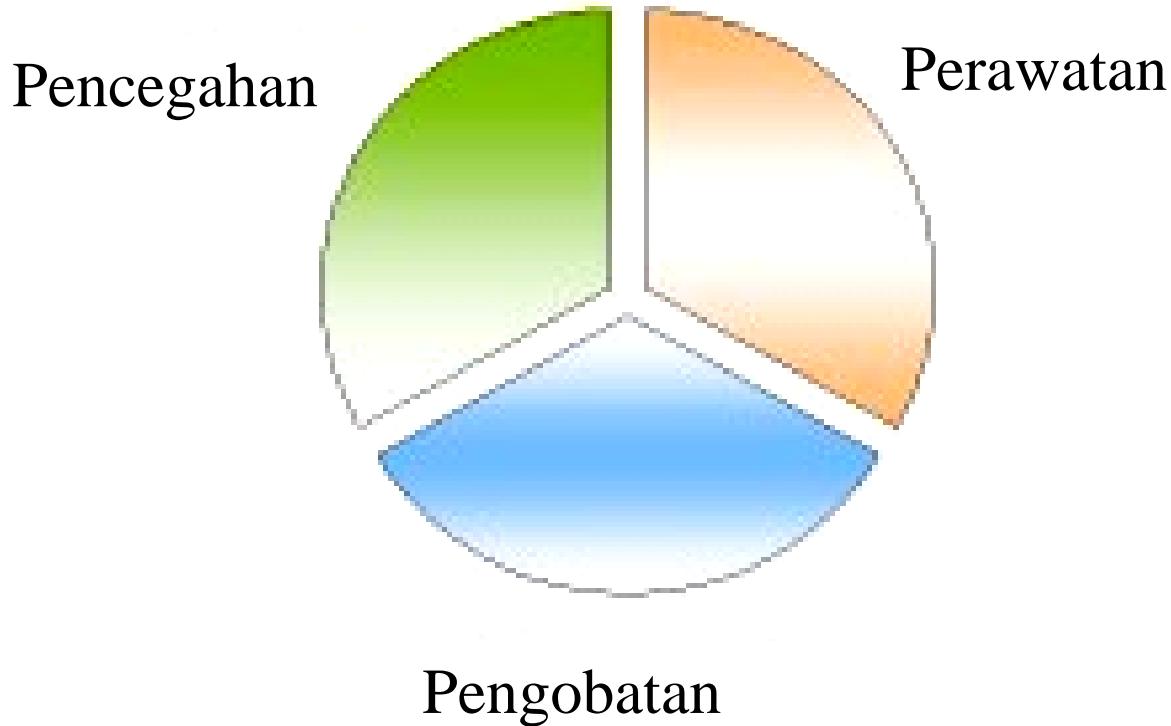

It is abundantly clear that the incidence of all the common cancers in human is being determined by various potentially controllable external factors.

This is surely the most comforting fact to come out of all cancer research, for it means that cancer is, in large part, a preventable diseases.

World Cancer Research Funds (WCRF) & American Institute for Cancer Research (AICR) 1997: 670 halaman

WHO 2002

CANCER STRATEGIES

Bagaimana terjadinya kanker ?

85% kejadian kanker disebabkan oleh faktor dari luar tubuh:
Karsinogen (Polusi makanan /Minuman/ udara/air), sinar UV, virus, infeksi

Hanya 15% disebabkan oleh keturunan

Scale of the project

- 1. 5 years**
- 2. Meeting every 6 months**
- 3. Initially identified 500,000 papers**
 - > 6000 considered
 - 20 **Systematic Literature Review groups**

Global Pattern of Disease

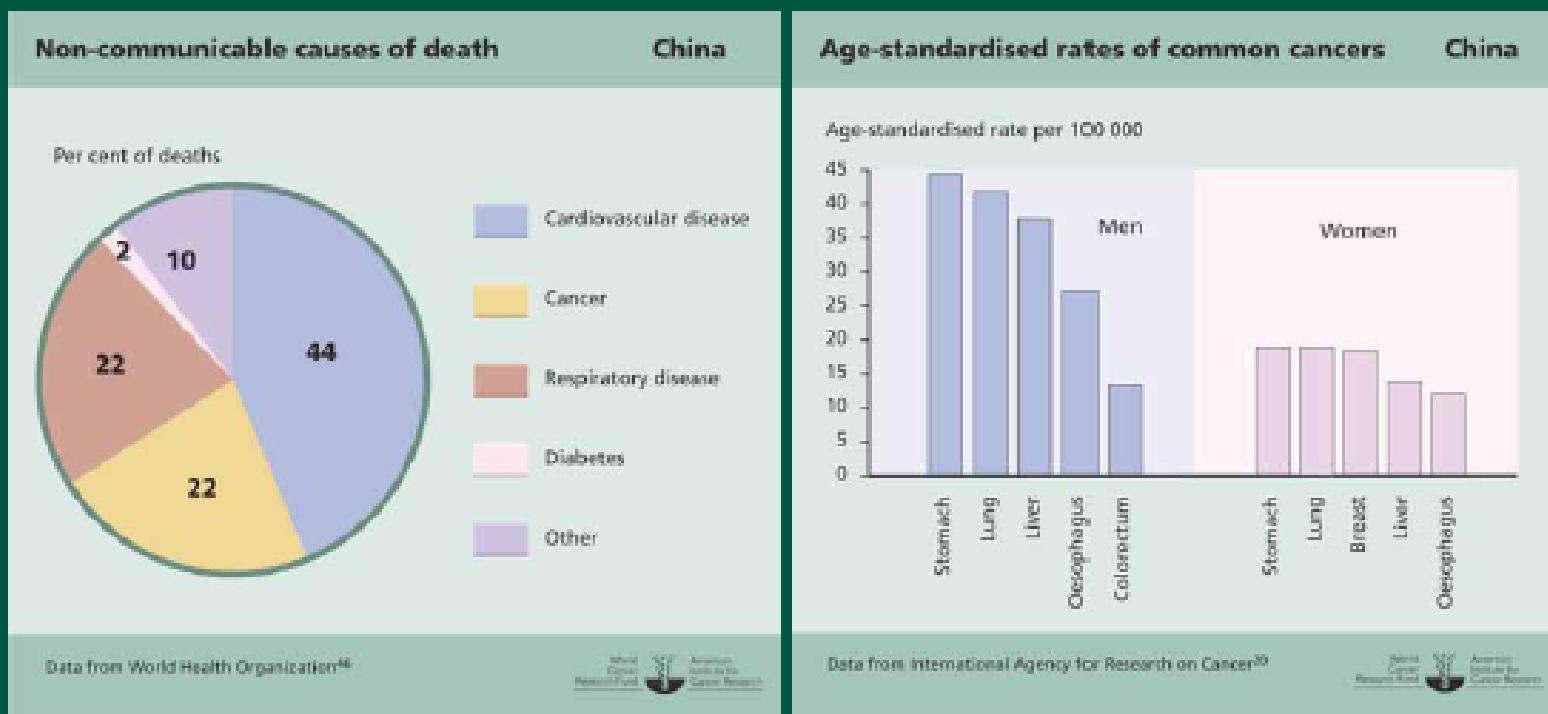

(WHO 2005)

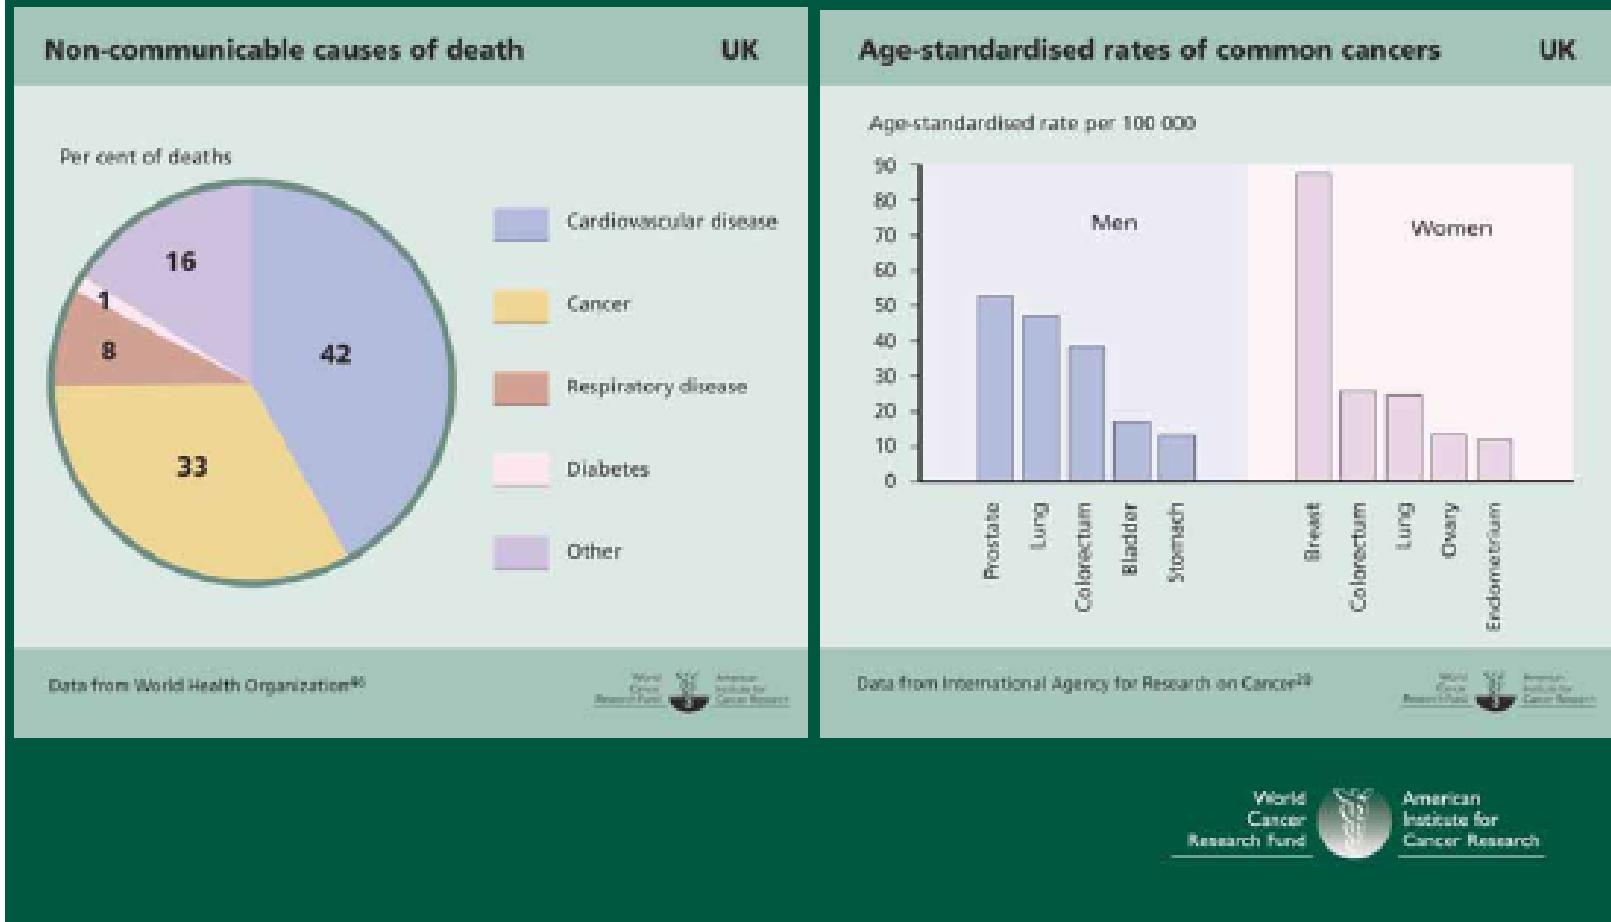

Countries grouped by income

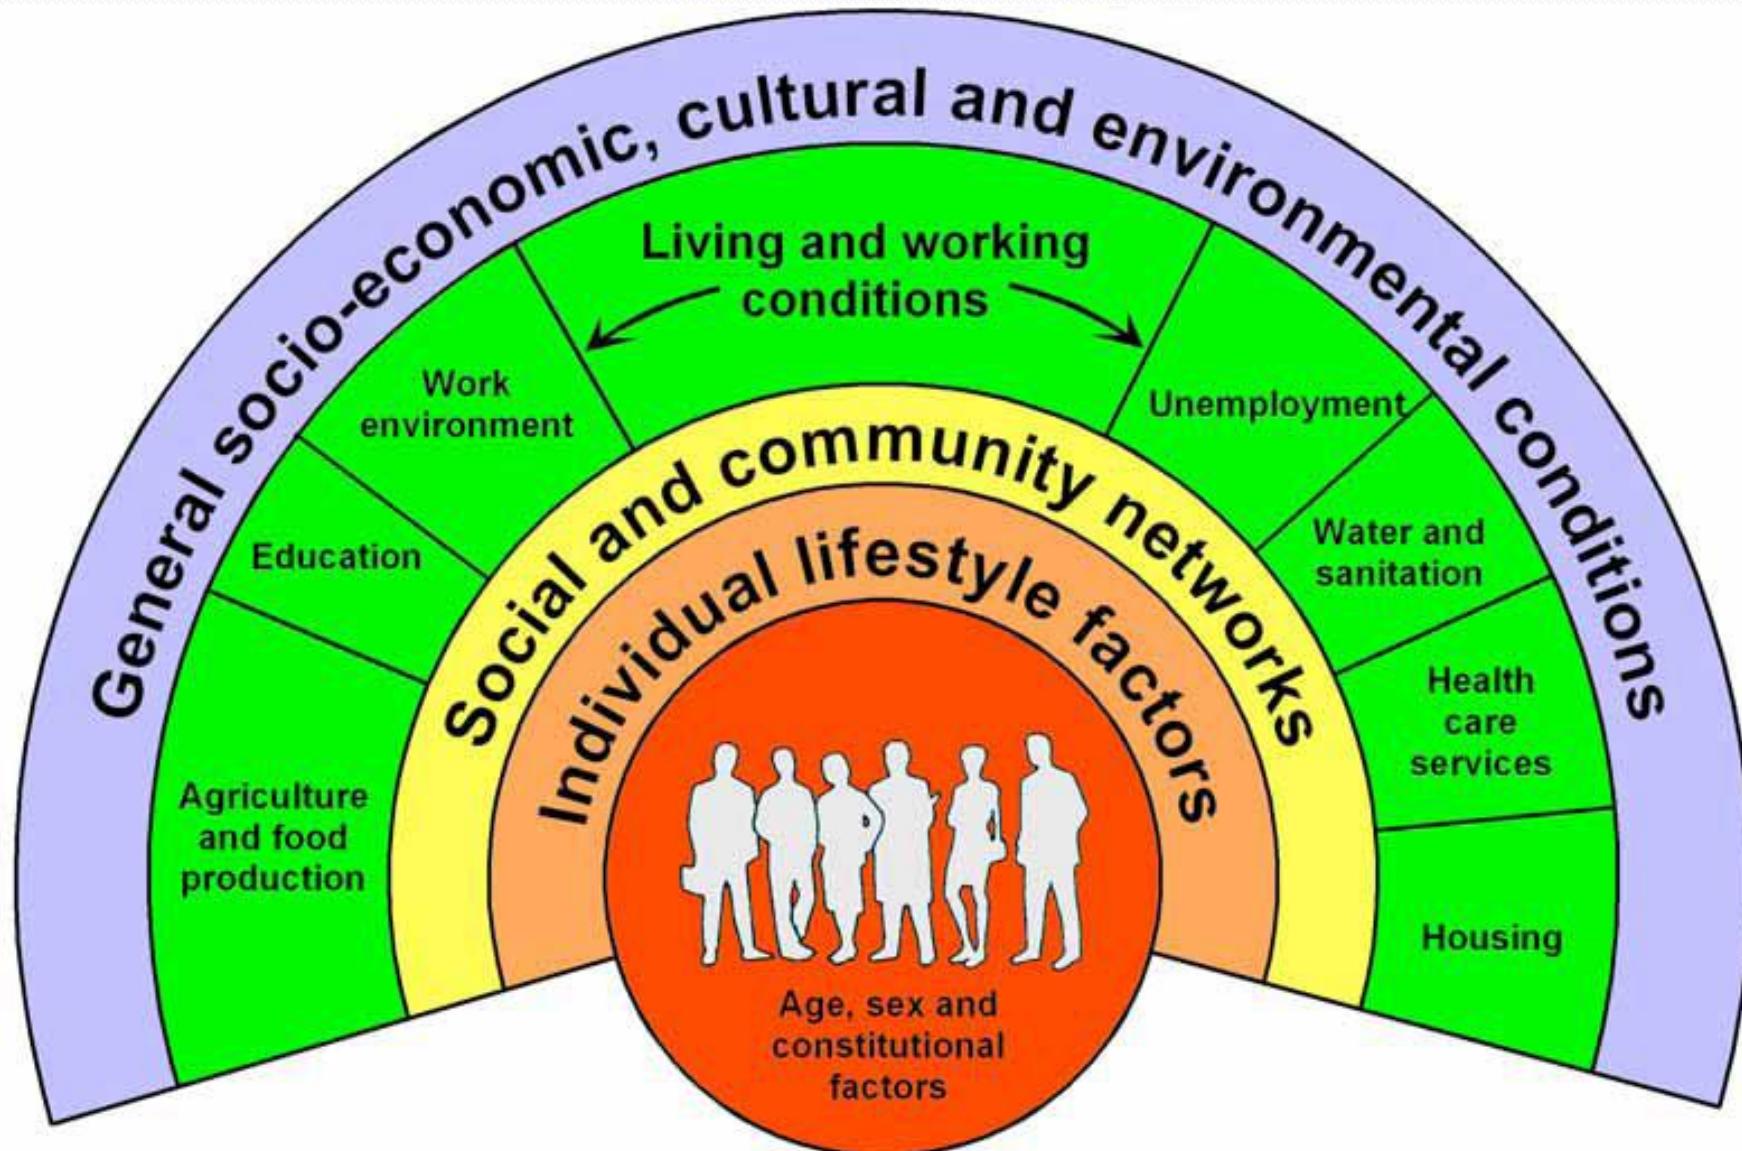

Global Patterns in Cancer: China

Global Patterns in Cancer: UK

The main determinants of health

Recommendations

- 1. For ‘convincing’ or ‘probable’ exposures only**
- 2. Consistent with recommendations for other chronic diseases**

Recommendations cover

1. Body fatness and physical activity

2. Diet

- Foods and drinks that promote weight gain

- Plant foods

- Animal foods

- Alcoholic drinks

- Preservation, processing, preparation

- Dietary supplements

3. Special recommendations

- Breastfeeding

- Cancer survivors

PLANT FOODS

Eat mostly foods of plant origin

PUBLIC HEALTH GOALS

Population average consumption of non-starchy¹ vegetables and of fruits to be at least 600 g (21 oz) daily²

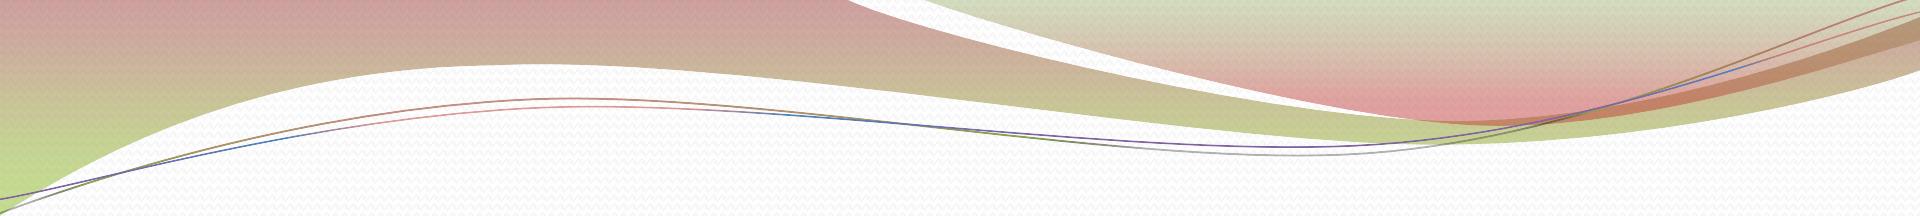

Relatively unprocessed cereals (grains) and/or pulses (legumes), and other foods that are a natural source of dietary fibre, to contribute to a population average of at least 25 g non-starch polysaccharide daily

PERSONAL RECOMMENDATIONS

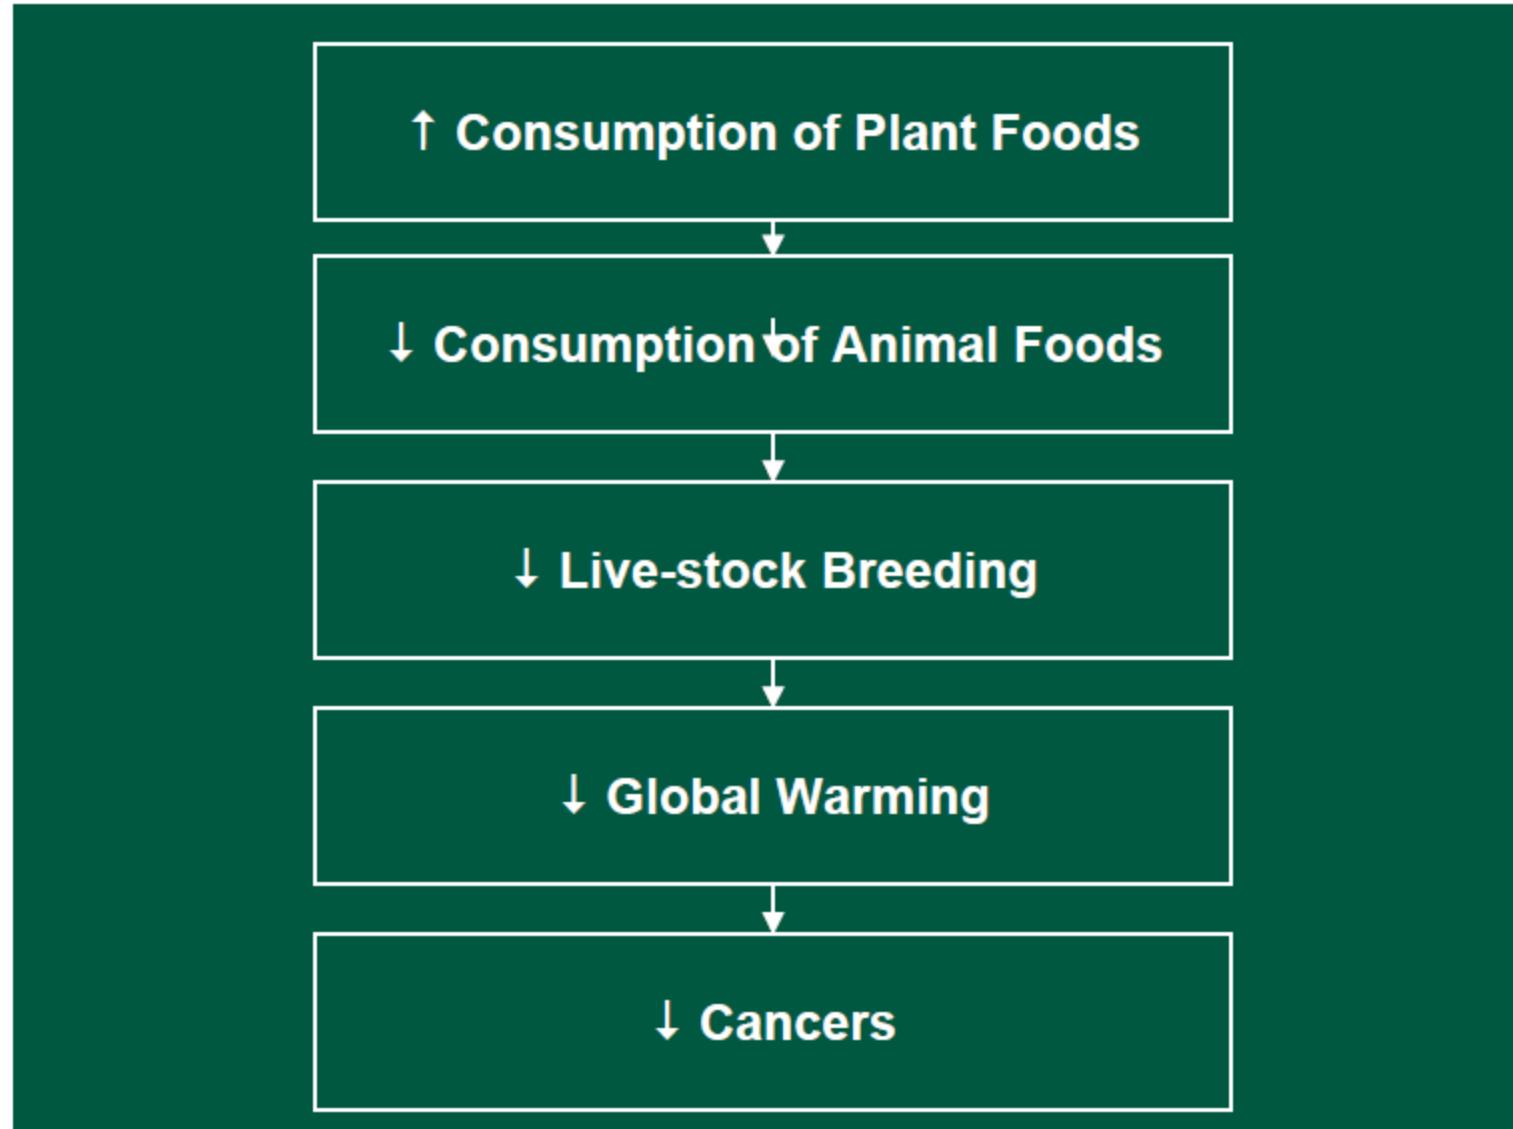

Eat at least five portions/servings (at least 400 g or 14 oz) of a variety² of non-starchy vegetables and of fruits every day

Eat relatively unprocessed cereals (grains) and/or pulses (legumes) with every meal³

Limit refined starchy foods

The recommendation is in
consonance with the theme of
the 2007 NOBEL PRIZE
for peace.

RECOMMENDATION 7

PRESERVATION, PROCESSING, PREPARATION

Limit consumption of salt¹

Avoid mouldy cereals (grains) or pulses (legumes)

PUBLIC HEALTH GOALS

Population average consumption of salt from all sources to be less than 5 g (2 g of sodium) a day

Proportion of the population consuming more than 6 g of salt (2.4 g of sodium) a day to be halved every 10 years

Minimise exposure to aflatoxins from mouldy cereals (grains) or pulses (legumes)

PERSONAL RECOMMENDATIONS

Avoid salt-preserved, salted, or salty foods; preserve foods without using salt¹

Limit consumption of processed foods with added salt to ensure an intake of less than 6 g (2.4 g sodium) a day

Do not eat mouldy cereals (grains) or pulses (legumes)

¹ Methods of preservation that do not or need not use salt include refrigeration, freezing, drying, bottling, canning, and fermentation

RECOMMENDATION 8

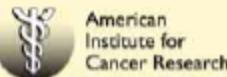

Aim to meet nutritional needs through diet alone

PUBLIC HEALTH GOALS

Maximise the proportion of the population
achieving nutritional adequacy without
dietary supplements

PERSONAL RECOMMENDATION

Dietary supplements are not recommended
for cancer prevention

MAKAN IKAN DAN NASI SAMA BANYAKNYA: BAGUS
KURANG: SAYURAN DAN BUAH, BERAS COKLAT

Aplikasi sorgum sebagai pangan sehat untuk penderita dan mencegah Diabetes dan kanker

Prof. Dr. Fransiska Zakaria Rungkat, MSc

INSTITUT PERTANIAN BOGOR

2014

HALF POLISHED SORGHUM HAS LOWER LOW GLYCEMIC INDEX AND HIGHER ANTIOXIDANT ACTIVITY ON ERYTHROCYTE AND PREVENTED COLON CANCER DEVELOPMENT IN RATS INDUCED WITH AOM CARCINOGEN

SORGUM SETENGAH SOSOH.
ANTI DIABETES, ANTI KANKER

FRANSISKA RUNGKAT-ZAKARIA¹, YUSDA SALIMI²
AND BAMBANG PONCO³

BACKGROUND

- ❖ Consumption of food derived from plants is expected to increase along with the awareness of health maintenance (**KONSUMSI PANGAN NABATI AKAN MENINGKAT**)
- ❖ Increasing demand of whole unpolished grains is predicted to rise due to interest in these grains as sources of complex carbohydrate and bioactive compounds such as antioxidants (**BIJI UTUH, TIDAK DISOSOH**)
- ❖ This prediction is related to the recommendation by **WHO (1997, 2008)** on diet for the prevention of cancer and other degenerative diseases

WHO 2008

**DIABETES: 90 % KARENA POLA MAKAN DAN
AKTIFITAS FISIK KURANG**

PENYAKIT JANTUNG: 80 %.....

KANKER: 35%.....

POLA MAKAN SEHAT YG DISARANKAN:....

NABATI (TANAMAN).....

UTUH (DIKUNYAH).....

ALAMI

VARIASI.....

DIABETES:
GULA DARAH TIDAK TERKONTROL/TINGGI
PANKREAS (PENGHASIL INSULIN): RUSAK
TEKANAN OKSIDATIF
(BANYAK SENYAWA RADIKAL/RADIKAL BEBAS)

NEED: FOODS WITH

- LOW GLYCEMIC INDEX:

WHOLE FOODS AS SOURCE
OF COMPLEX CARBOHYDRATE

- FOODS WITH HIGH ANTIOXIDANTS

- TINGGI SERAT

Sorghum (*Sorghum bicolor* L Moench)

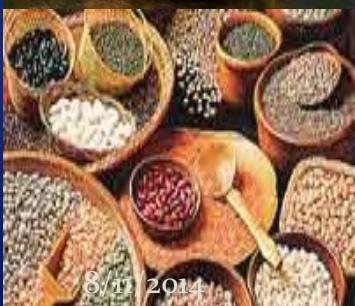

- Important grain originated from Africa
- Spread and produced in countries
- World production in 1990: 58 million tons
USA: Amerika (25 persen), India (21 .5 psersen), Mexico (11 persen), Cina (9 persen) , Nigeria (7 persen).
- Consumed by 500 millions people in > 30 countries
In form of unleavened bread (capati) and porridge (FAO, 1991).
- Indonesia has developed several varieties (UPCA-S₁, UPCA-S₂, No.46, No.6c , No. 7c)
- **but yet consumed regularly**

Sebaran Komoditi

Anonymous (2006)

Indonesia → ancaman krisis pangan pd 2035. Jmlh penduduk 400 juta → kebutuhan beras nasional mencapai ±36 juta ton.

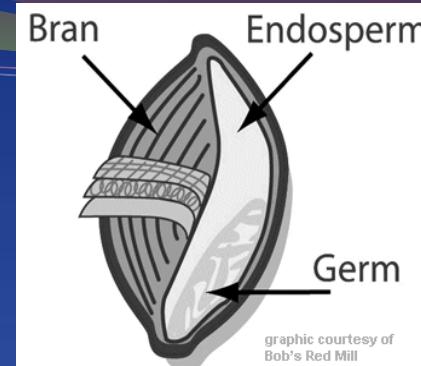

Produksi beras nasional masih di kisaran 25 - 29 juta ton → Defisit Pangan Nasional

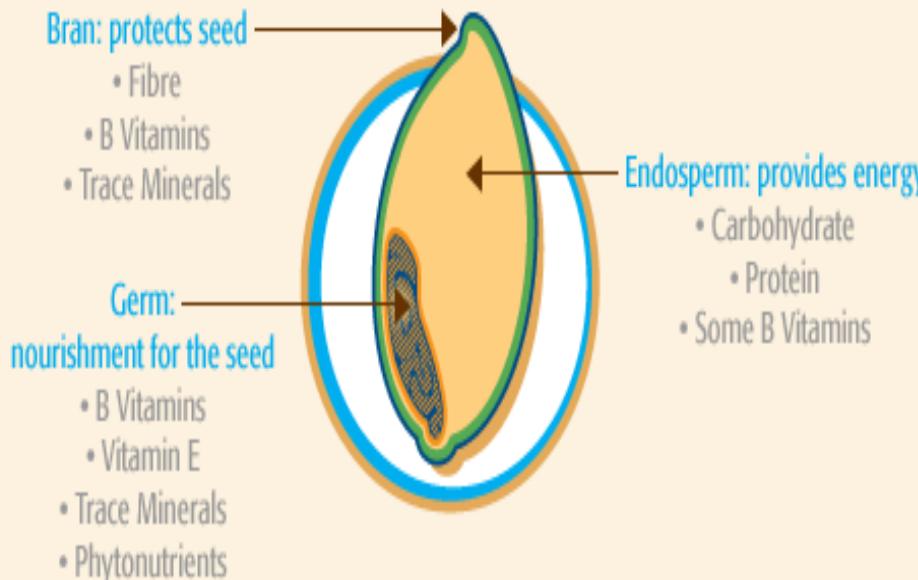

Sumber karbohidrat utama penduduk Indonesia → padi & jagung → Produksi kedua komoditi belum mencukupi kebutuhan pangan nasional → impor kedua komoditi masih tinggi

policosanols

- Approximately 38–92 mg / 100 g sorghum grain.
- Weller and Hwang (2003) reported that these compounds may be the most commercially valuable.
- Castano et al. (2002): 10 mg/day of policosanol was more effective than 20 mg/day of lovastatinin reducing LDL cholesterol and raising HDL cholesterol levels.
- These authors also report that the policosanols present no toxic effects even at high doses.
- Other positive benefits: lipid peroxidation, platelet aggregation and smooth muscle cell proliferation
- natural, safe and effective dietary alternatives to statin medication.
- Efficacy and economic potential of the sorghum policosanols should be investigated.

- sorgum kaya selulosa, β -glukan, hemiselulosa (Waniska 2000) PD BEKATULNYA.
- Banyak memiliki peranan untuk pencegahan penyakit degeneratif seperti diabetes millitus dan kanker.

Serealia

Polifenol
&
Flavonoid
Lipid
serat

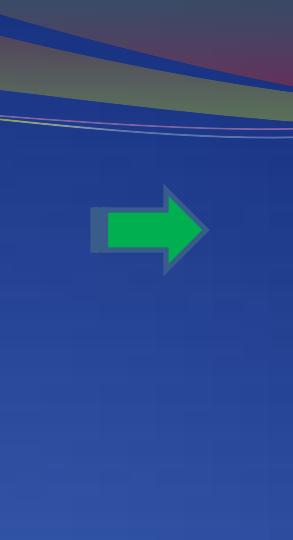

Efek
kesehatan

- ❖ Menekan kolesterol
- ❖ Melindungi lipid dari oksidasi
- ❖ Antikarsinogenik
- ❖ Menghambat pertumbuhan tumor & kanker
- ❖ Meningkatkan sistem imun
- ❖ Melindungi sel eritrosit dari hemolisis
- ❖ Mengurangi penyakit-penyakit karena oksidasi *low density lipoprotein* (LDL)
- ❖ Baik untuk diabetisi dan orang sehat

Komponen serat
dan antioksidan
serealia →
“oatmeal”

Dikomersialisasikan secara
besar-besaran di dunia.

Berperan sebagai :
• Imunomodulator
• Anti aterosklerosis

Sebagai makanan langsung
atau raw material untuk
produk lain

Deskripsi konsumen :
(+) Produk secara keseluruhan
menyenangkan & memiliki efek baik bagi
kesehatan
(-) Harga cukup mahal.....
Sumber : www.quakeroatmeal.com

PEMANFAATAN SORGUM

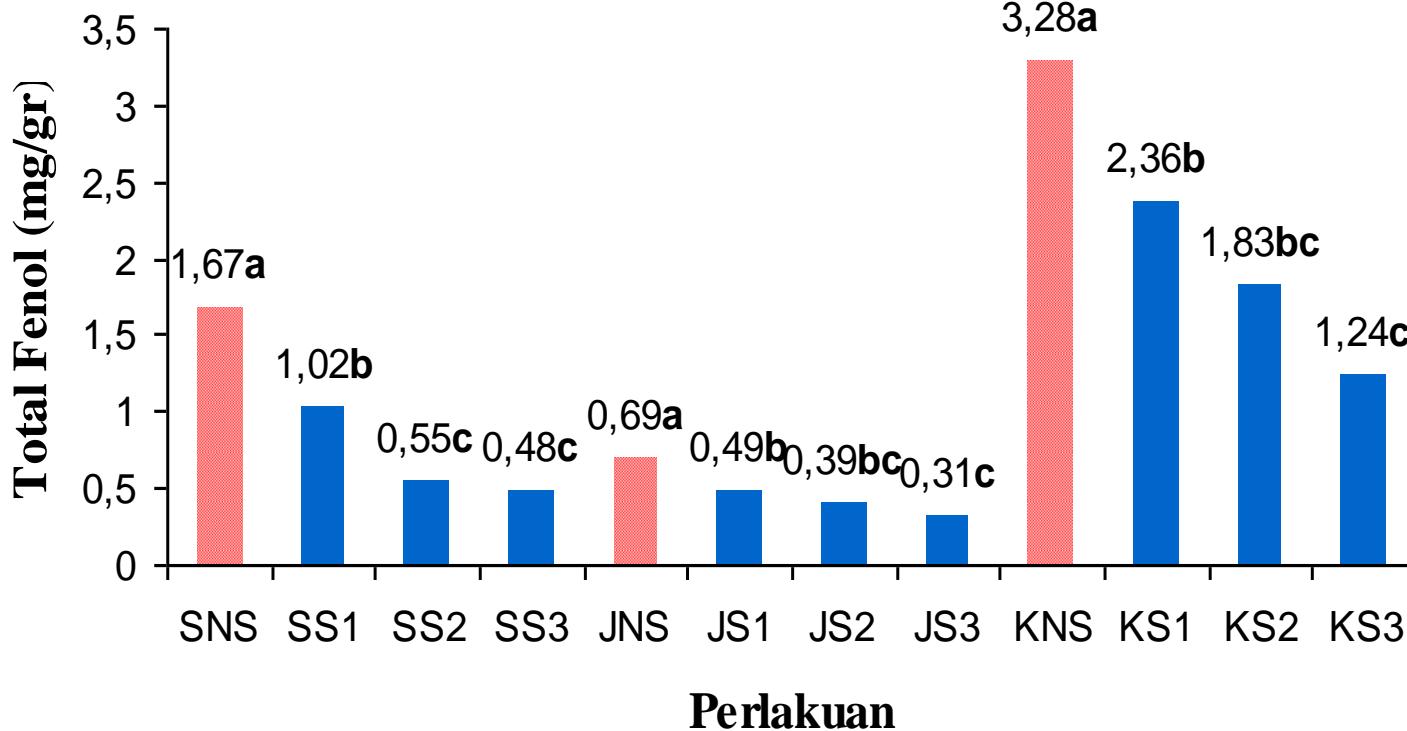

- 1. Konsumsi beras dapat diturunkan tetapi tidak menganggu konsumsi kalori**
- 2. Pangan untuk penderita diabetes, mencegah diabetes**
- 3. Menyiapkan bahan baku untuk implementasi program diversifikasi pangan, khususnya diversifikasi karbohidrat**
- 4. Meningkatkan kegiatan budidaya serealia lain selain beras**
- 5. Mempertahankan keragaman hayati serealia tropikal di Indonesia**

OBJECTIVES

TO STUDY
THE GLYCEMIC INDEX FOR DIABETES
BODY ANTIOXIDANT ACTIVITY
ANTICANCER

METHODOLOGY

RAT DIET EXPERIMENTS

GROUPS	DESCRIPTION
KO	CONTROL, WITH CORN STARCH AS SOURCE OF CARBOHYDRATE
S-50	SOURCE OF CARBOHYDRATE: 50% FROM SORGHUM FLOUR, 50% FROM CORN STARCH
S-100	SOURCE OF CARBOHYDRATE: 100% FROM SORGHUM FLOUR

RESULTS & DISCUSSION

RAT GROWTH DURING 56 DAYS OF FEEDING

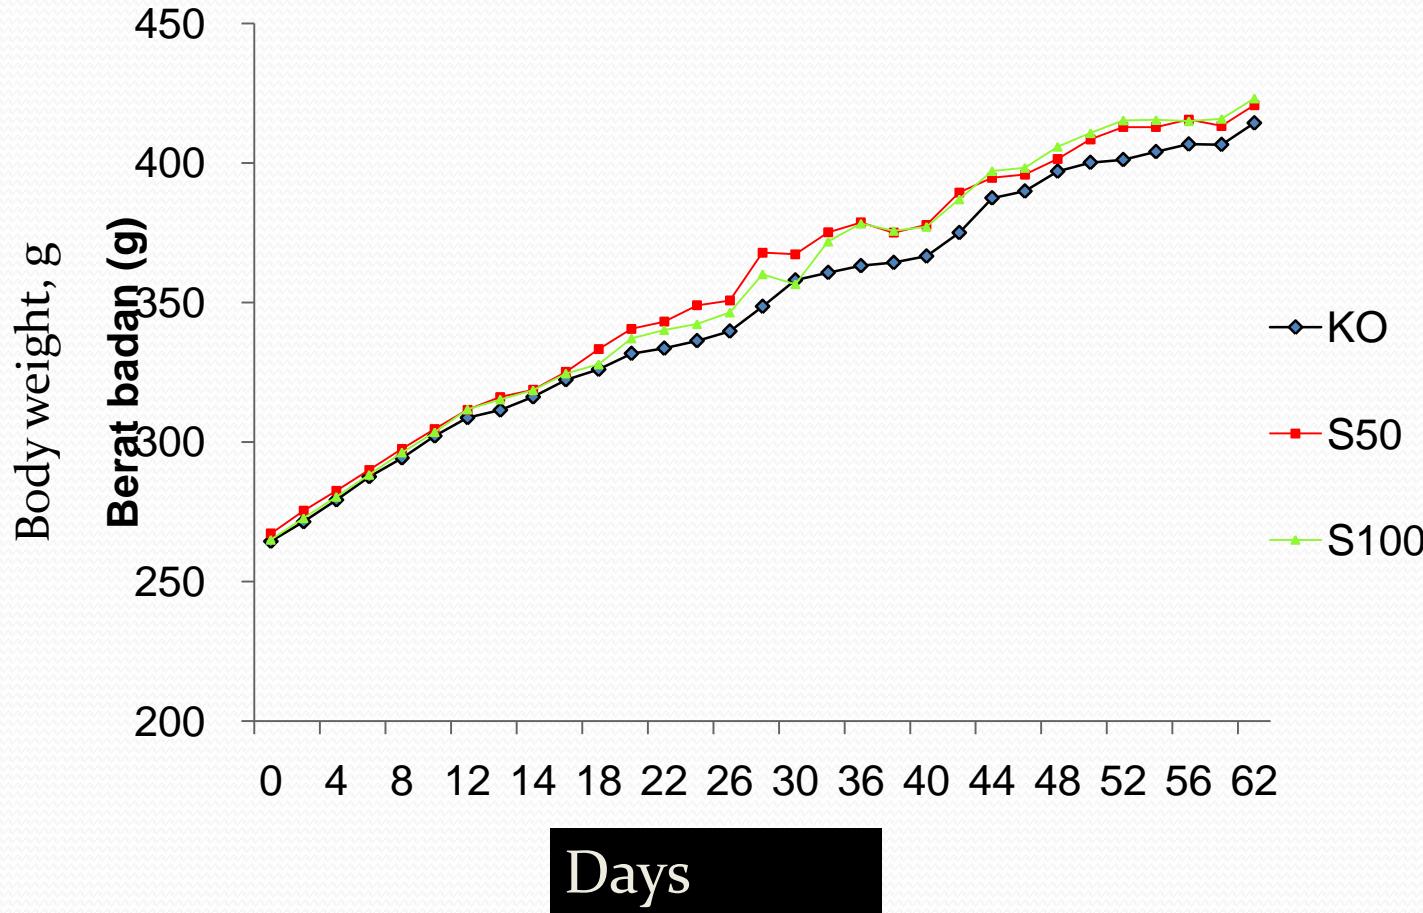

Figure 3. Growth of mice during the 29 weeks of experiment. Group A was the control group, group B, C and D received AOM carcinogen. Group C and D received sorghum 50 and 100% as the source of carbohydrate.

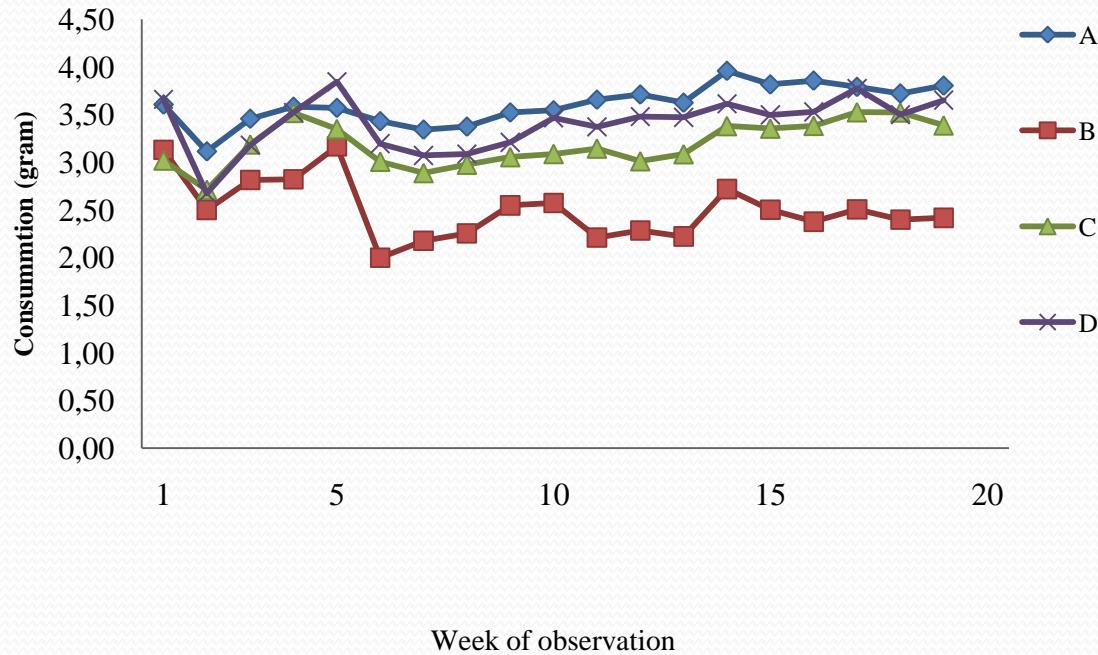

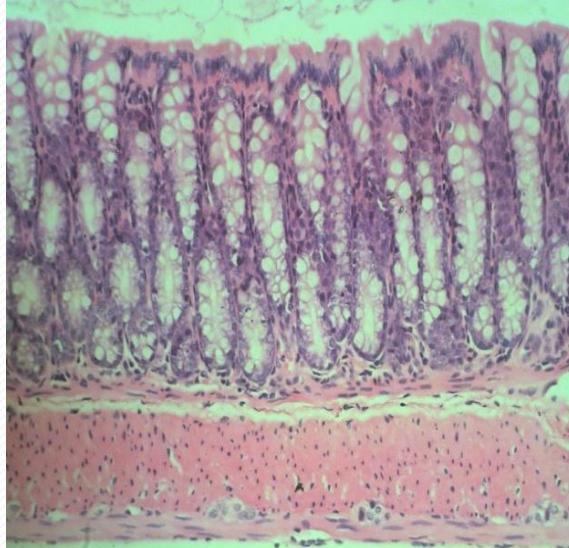

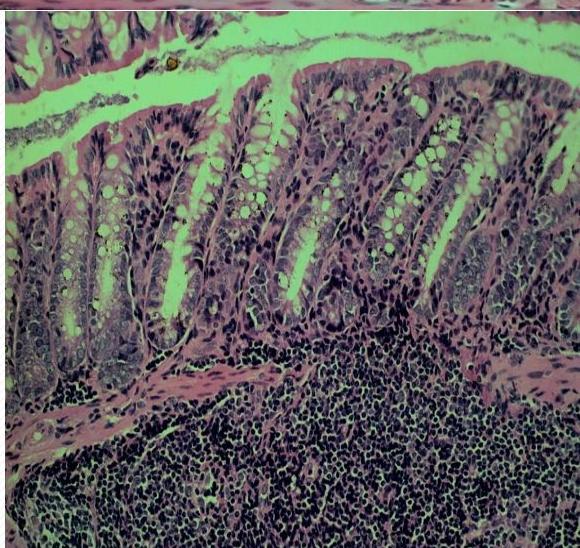

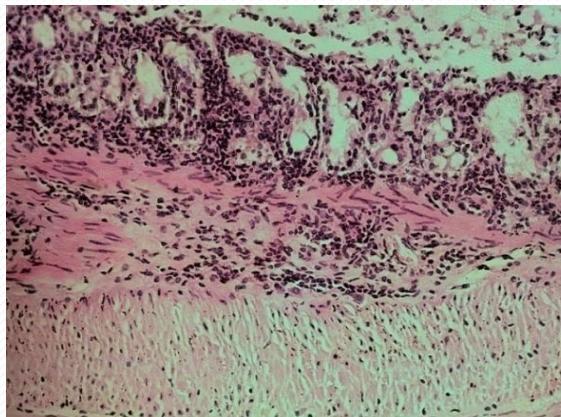

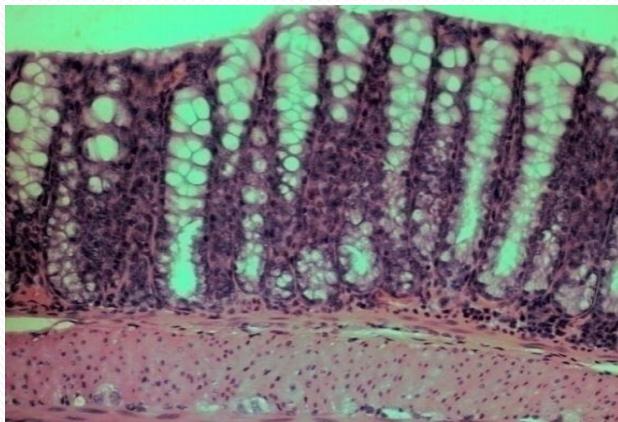

Figure 4. Photomicrograph of mice colon after consuming diets for 29 weeks and received AOM + DSS carcinogenic. Group A was the control group, group B, C and D received AOM carcinogen. Group C and D received sorghum 50 and 100% as the source of carbohydrate.

Table 2. Mice colon profile expressed by HE staining

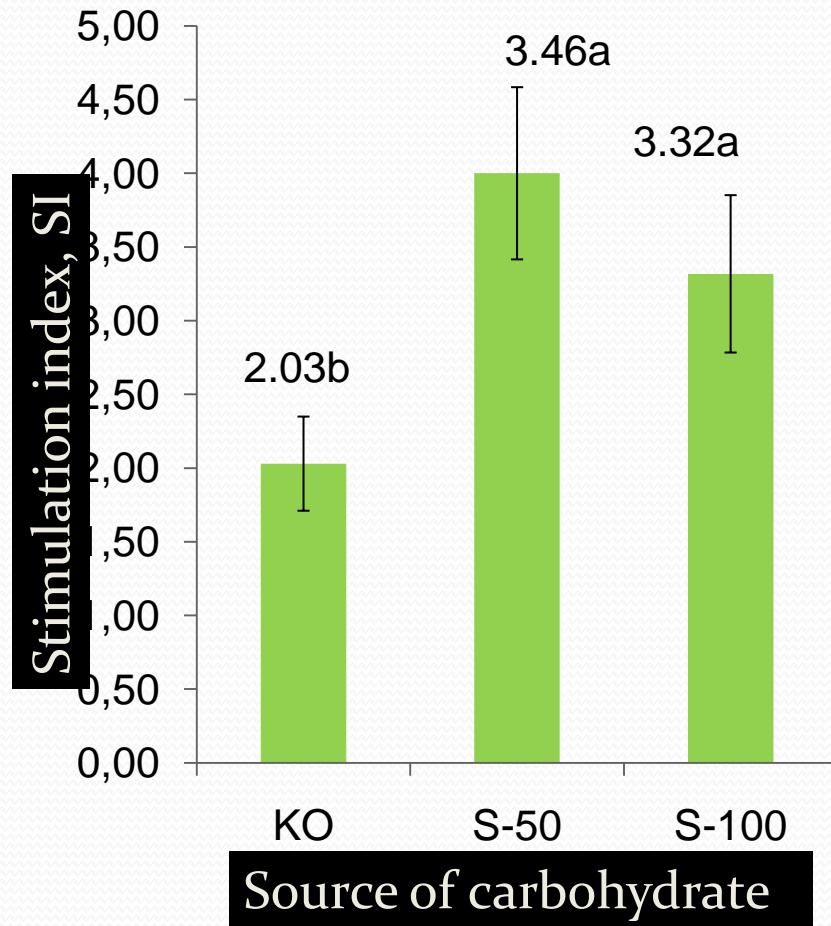

Note: Different superscripts on the same column show significant different ($p<0,05$). Group A was the control group, group B, C and D received AOM carcinogen. Group C and D received sorghum 50 and 100% as the source of carbohydrate.

Mice	Average score of colitic mark
Group A (std + Saline injection)	0,00 ^a ±0,00
Group B (std+AOM,DSS)	3,60 ^c ±0,50
Group C (S50+AOM,DSS)	1,50 ^b ±0,54
Group D (S100+AOM,DSS)	1,30 ^b ±0,51

Figure . Photomicrograph of mice colon after consuming sorghum diets for 29 weeks and received AOM + DSS carcinogenic. Group A was the control group, group B, C and D received AOM carcinogen. Group C and D received sorghum 50 and 100% as the source of carbohydrate.

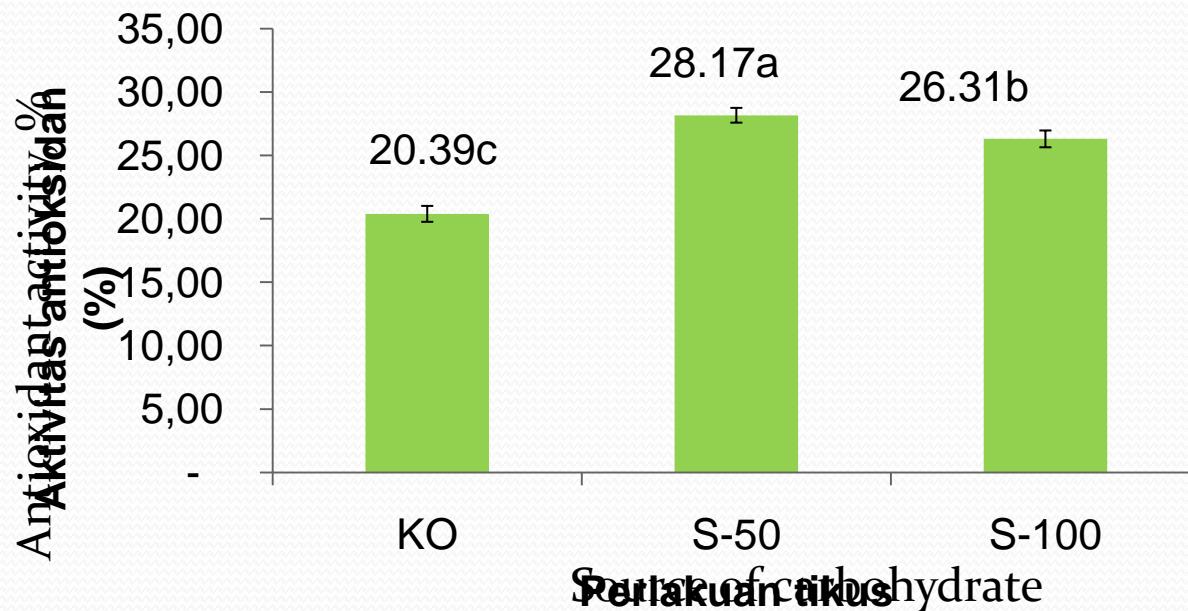

LYMPHOCYTE PROLIFERATION ACTIVITY

adonan

conclusion

Sorghum half polished has GI of 44.69 which classifies sorghum into low GI food category (DIABETES).

Sorghum has more potency in inhibiting erythrocyte lysis compare to millet and black glutinous rice extracts (ANTIOKSIDAN).

In in vivo mice study, sorghum showed inhibition on mucosal damage caused by AOM-DSS and reduce COX-2 enzyme production in mucosal cell (KANKER).

These results demonstrated anti diabetic and anticancer properties of sorghum
